1 Go to Settings.

To stop receiving the tvOS developer betas, go to **Settings > System > Software Update > and turn off Get Beta Updates**.

2 Wait for next tvOS release.

Once your setting has changed, your Apple TV will no longer receive tvOS developer betas. When the next commercial version of tvOS is released, it will automatically install if you have Automatic Software Update turned on. Or, you can install it from Settings > System > Software Updates > Update Software.
